Silicone & Technical Products (Pty) Ltd was started by Ivan and Beverley de Klerk in 1984 – Cape Town based entrepreneurs with a vision for perfection. In the ensuing 34 years the company has become a second-generation company with their son, Matthew, joining the business in 2014. Like other successful family owned manufacturing and hardware wholesale trading businesses in South Africa, the de Klerk’s attribute their success to the passion and dedication of the family as well as the employees who share in the business ethos effectively transforming it into a corporate sized company where voices are heard and success is shared and celebrated with all.

Since inception in 1984, S&TP acted as representatives for Dow Corning Silicones, GE Silicones, GE Bayer Silicones, and Momentive Performance Materials. In 2009 the decision to become an independent supplier of silicone and silicone related products to the South African market allowed them to leverage expertise, products and prices from primary and secondary overseas suppliers and because of this and their manufacturing expertise in the food approved silicone product space they are seen as a first in their class independent supplier, re-packer of sealants and adhesives as well as a producer of silicone and non-silicone related chemical products in Africa.

Four branded operating divisions comprising of SILTECH sealants and adhesives, BIOSIL silicone and non-silicone based chemicals, FCD foam control dispersants and Y-CLEAN cleaning chemicals offer exceptional solution related products to all who wish to use them.

Quality Management Systems audited by the SABS encompass: ISO9001:2015 Customer Service, FSSC22000 for food safety. All the food grade products are HACCP, Kosher, Halaal approved and have FDA compliances. SABS SANS 1828 certification approved on Aqueous Degreasers, Concentrated All Purpose Cleaners and our Powdered Oxygenating Detergent Agents, which are specifically intended for use in the food industry. Y-Clean disinfectants are NRCS approved.

Silicone & Technical Products (Pty) Ltd operates out of Cape Town as head office as well as Johannesburg and Durban. The team comprises of around 80 staff members and is an equal opportunity company with codes of Conduct and Ethics as drivers.

The focused policies of providing excellent customer service, quality products as well as industry experience and expertise will dominate their landscape as they strive for innovation to be market leaders in the core areas in which they operate but continuing to build and invest in the team, the products and the processes that hold them together as a unit.

Sitech – PU40 is a single-component, moisture curing, polyurethane-based sealant material which is thixotropic and easily applied by a cartridge gun. Sitech – PU40 cures to a paintable, weather & water resistant, permanent elasticity sealant without affecting its volume.

Very flexible and durable | Provide good impact resistance | Vary in degree of resistance to heat and chemicals | Paintable, weather & water resistant | Permanent elasticity without affecting volume | Available in white, grey and black

100% Polyurethane | Low Shrinkage | Water Proof | Weather Proof | Permanently Elastic

Non-corrosive | Will Not Stain Substrate | Low Modulus | Non-slumping | Strong

SILTECH 9000
PAINTABLE ACRYLIC SEALANT 260ML

One component paintable water based sealant | Exhibit very good adhesion characteristics to most construction substrates | Suitable for decorative finishing before painting and many other DIY applications.

APPLICATIONS INCLUDE:
- Baseboards
- Crack Filling
- Door Frames
- Window Frames
- Joint or gap requiring weather-tight seal

Non-corrosive Non-slumping PAINTABLE

ALSO AVAILABLE IN 280ML SILTECH 900
ACRYLIC SEALANTS & PROMO BUNDLES

### Recommended Cleaning Procedures

**Important Points On Using Solvents**

- All values & information listed are indicative and should not be used as specifications.
- Average curing time for sealants per 3mm deep section is 24 hours at 25°C.

### Plumbing

- Recommended to use adhesion promoters when required.
- Always use clean containers for solvent use and for solvent storage.
- Always use clean containers for solvent use and for solvent storage.
- Keep all glazing areas free of dust and do not allow dust and debris to be deposited on the cleaned surface.
- Clean only as much area as can be sealed in one hour.
- Clean only as much area as can be sealed in one hour.
- Remove all loose material such as dirt and dust, plus any oil, frost, and other contaminants from the surface.
- The use of proper materials and the following cleaning procedures are critical for sealant adhesion.

### Commonly used solvents for cleaning substrates prior to wet sealing with silicone are:

- Toluene
- Iso Propyl Alcohol (IPA) – Only pure industrial grade IPA shall be used (99.9% wt, purity)

### Cure rate/time

- **Polyurethane**
  - Estates: 2/24 hours
  - 2.5mm/day
  - 12 - 24 hours
- **Acrylic**
  - Estates: 2mm/24 hours
  - 3.1mm/day
  - 2mm/24 hours

### Solvent/substrate & sealant chosen. As always adhesion testing is recommended prior to sealing.

4. Follow all precautions on the solvent warning label.

5. Use adhesion promoters when required.

6. Clean only as much area as can be sealed in one hour.

7. Keep the glazing area free of dust and do not allow dust and debris to be deposited on the cleaned surface.

8. Remove all loose material such as dirt and dust, plus any oil, frost, and other contaminants from the surface.

9. The use of proper materials and the following cleaning procedures are critical for sealant adhesion.

10. Commonly used solvents for cleaning substrates prior to wet sealing with silicone are:

- Toluene
- Iso Propyl Alcohol (IPA) – Only pure industrial grade IPA shall be used (99.9% wt, purity)

11. Recommended to use adhesion promoters when required.

12. Always use clean containers for solvent use and for solvent storage.

13. Keep all glazing areas free of dust and do not allow dust and debris to be deposited on the cleaned surface.

14. Clean only as much area as can be sealed in one hour.

15. Remove all loose material such as dirt and dust, plus any oil, frost, and other contaminants from the surface.

16. The use of proper materials and the following cleaning procedures are critical for sealant adhesion.

17. Commonly used solvents for cleaning substrates prior to wet sealing with silicone are:

- Toluene
- Iso Propyl Alcohol (IPA) – Only pure industrial grade IPA shall be used (99.9% wt, purity)
AQUEOUS DEGREASER

- Removes grease, oil and grime.
- Suitable for use in the food processing industry, restaurants, printing plants, auto-repair workshops and other industrial areas.
With Y-CLEAN's range of specially formulated cleaning products for industrial and home applications you don't need to invest in multiple brands to get excellent results.
